IB PVC Roof Systems, A Better Choice. With easier installation, less time and labor costs, longest warranty, lowest maintenance and most durable membrane, coupled with the best technical and product support team - IB Roof Systems is the right choice.

ASPHALT vs. IB-PVC

- **REDUNDANT**
Multiple layers required to obtain warranty term and performance.
- **TIME CONSUMING**
Installation of multiple layers results in increased labor costs.
- **DANGEROUS**
Injuries can occur from contact with the Hot Mop kettle, hot asphalt, and the open flame torch.
- **HAZARDOUS**
FIRE! Seams are often adhered through the use of a torch. Open flame can cause fires to ignite unexpectedly.
- **NOXIOUS**
Cold and Hot Applied Asphalt smell can be overwhelming during installation.
- **COSTLY**
A fire monitor must remain on the roof in case of combustion hours after installation. Insurance costs skyrocket due to the risk of fire.
- **DIRTY**
Asphaltic materials are black and transfer onto clothes and shoes. Asphalt is often tracked into the building through the roof access point.
- **NOT COOL**
Mod Bit/BUR systems struggle to achieve lifetime cool roof ratings increasing the building's thermal load and added HVAC system strain.

- ✓ **SINGLE LAYER**
Up to 30 year warranties, decades of proven performance and durability.
- ✓ **EFFICIENT**
Single layer installation saves time and money.
- ✓ **RESPONSIBLE**
Risk of injury is significantly minimized by the use of a hot air welding system.
- ✓ **SAFER**
IB Roof Systems utilizes a hot air welding process with no open flame which means no risk of fire during installation.
- ✓ **CONSIDERATE**
Negligible smoke is produced from the the hot air welding process.
- ✓ **PROFITABLE**
Install an IB Roof and realize the insurance and labor cost savings of a safer installation.
- ✓ **CLEAN**
IB Roof Systems PVC is uniquely formulated with an acrylic top coat which aids in the overall cleanliness of the roof during and after installation.
- ✓ **VERY COOL**
IB Roof Systems offers Energy Star rated, Cool Roof Rating Council listed, and Title 24 Compliant solutions saving money on heating and cooling costs.

For safety, lasting performance, and easier installation, Asphalt just has too many risks for quality, lasting roofing projects.
